# Technical guide

## How to change door gasket

---

ENG

1) Tools you may need for this guide:

Paper Towel

Small Brush

Scissor

Water

- 2) Please inspect the gasket when you receive it to ensure it has no cutmarks or other damage.
  
- 3) Remove the old gasket from the door. Make sure the groove is clean and dry. If not please clean it in the following manner. Use a small brush with a small amount of water and give it a gentle cleaning. Dry the areas with a paper towel.

- 4) Start with inserting the gasket from the middle of the doorhandle – (see picture) and work your way down. Make sure the wide part of the gasket point to the center of the door. Do not pull or stretch the gasket too much but insert it smoothly and work your way round. In the corners you can stretch the inside of the gasket a bit to make it flatten.

**OBS! The installed gasket length should be around 313cm the received gasket is 320cm long**

- 5) When you have installed the gasket all the way around cut the gasket so it will seal the whole door
